

## Java

```
class Solution {  
    public List<String> printVertically(String s) {  
  
    }  
}
```

---

## JavaScript

```
/**  
 * @param {string} s  
 * @return {string[]}  
 */  
var printVertically = function(s) {  
  
};
```

---

## TypeScript

```
function printVertically(s: string): string[] {  
  
};
```

---

## C++

```
class Solution {  
public:
```

```
    vector<string> printVertically(string s) {  
    }  
};  
-----
```

## C#

```
public class Solution {  
    public IList<string> PrintVertically(string s) {  
    }  
}
```

## Kotlin

```
class Solution {  
    fun printVertically(s: String): List<String> {  
    }  
}
```

## Go

```
func printVertically(s string) []string {  
}
```
